

Fast and Accurate.  
**Trusted Results.**

## Insist upon Radalink for your buyer's inspection.

Potential buyers may request to have a radon test done as part of their home inspection process. To ensure the accuracy of the test, you should only accept a Certified Radon Test which can be provided by professional inspectors who use Radalink continuous radon monitors.

## Offer buyers a certified radon test.

Often non-certified radon tests will produce inaccurate results. This can cause home owners unnecessary expenses, and can require the installation of an unneeded radon mitigation system. Accept nothing less than a certified radon test which is backed by a written warranty. Consider a pre-listing radon test for your home to ensure radon issues do not slow the sale.

Insist upon Radalink... *Results you can depend on!*

## Work with the Best in the Business.

Radalink's knowledgeable staff is always available to provide reliable, accurate information and guidance to address the questions and concerns of all involved parties. Our highly trained and skilled radon measurement specialists (not just the home inspector) review all test results for indications of influence caused by severe storms, closed house conditions or possible instrument disturbance or malfunction.

When results are below the action level, you are protected by the industry's only 120-day written guarantee—which actually pays toward the cost of mitigation.

### Be Confident in your Buyer's Safety.

The home you're selling could have invisible dangers caused by radon. And buyers are often aware of this danger. But, when your home inspector uses Radalink, your buyers will find peace of mind in knowing they are being provided an accurate radon measurement. By insisting on offering only a Certified Radon Report from Radalink, your buyers will be safe and confident in their choice of buying your home.

### Our Mission:

Radalink is focused on eliminating radon related deaths by raising awareness, providing education, and innovative technology with superior accuracy and professionalism.

**Work with the very best—choose home inspectors who use Radalink Radon Monitors.**

## If It Doesn't Say Radalink, It's Not a Certified Radon Report.

Radalink is one of the few radon instrument manufacturers with devices that meet the EPA real estate device requirement for minimum sensitivity of at least 16 CPH/pCi/L. Since the EPA abandoned the radon proficiency program in 1996, the private proficiency program and its licensing states have continued to disregard this requirement, allowing home inspectors all across the country and to perform radon tests with substandard equipment.
